'Shadows of a star'

Designed by

L U M is a star shaped light formed of two interlocking tetrahedrons. Eight triangle faces and 12 edges surround a single lamp, creating a light of geometric perfection with an intriguing play of shadows.

Process: The L U M lighting objects consist of 20 single solid brass metal pieces, dwelled to the inter-logged tetrahedron shape. The now shaped star is then brushed and depending on the finish nickel plated or powder coated with a bronze lacquer.
