

LEN

'No end of fire'

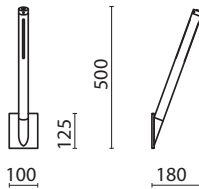

Designed by
Peter Straka
Vienna 2005

Pure crafted perfection combined with the fascination of light in its purest and oldest form – fire. LEN is a torch that never burns down.

Process: The base material of the LEN is brass. The brass tube and plates are cut, then polished. All the components are nickel plated. Within the metal tube and underneath the lid is a glass that contains the odourless liquid paraffin.
